SYNTHETIC DEMO DOCUMENT. Fictional patient for software demonstration only. Not a clinical report. Phenotype adapted from a published case (PMID 28503313); variants include decoys.

Exome Sequencing Report (Trio)

Report ID DEMO-0427 · Issued 21 Oct 2026

Attma Demo Genomics Laboratory
For demonstration only

Patient: Demo Patient A
Age: 3 years
Sample: Blood, proband + both parents
Sex: Male
Referring clinician: Demo Clinic
Assembly: GRCh38

CLINICAL INFORMATION

Referred for genital anomalies noted at birth: cryptorchidism, ambiguous genitalia, hypospadias, micropenis and bifid scrotum, with small testes. Examination shows 2-3 toe syndactyly, a short nose and low-set ears. Atopic dermatitis since infancy. Biochemistry: low total cholesterol with raised 7-dehydrocholesterol and 8-dehydrocholesterol. Testosterone within normal limits. No cardiac anomaly on echocardiogram. Parents non-consanguineous; no family history of similar features.

CANDIDATE VARIANTS

Gene	Variant (GRCh38)	Zygosity	Inheritance	Laboratory classification
DHCR7	11-71435478-T-C	Heterozygous	Maternal	Variant of uncertain significance
DHCR7	11-71437868-C-T	Heterozygous	Paternal	Variant of uncertain significance
AAGAB	15-67236719-TG-T	Heterozygous	Paternal	Variant of uncertain significance
—	11-17404525-G-A	Heterozygous	Maternal	Variant of uncertain significance
—	16-57659534-C-T	Heterozygous	De novo	Variant of uncertain significance
—	10-111078198-C-T	Heterozygous	Maternal	Variant of uncertain significance

Variants were filtered for population frequency below 1% and protein-altering or splice consequences. Gene symbols left blank were not assigned in this demo document.

INTERPRETATION

No variant was classified as pathogenic or likely pathogenic. Clinical correlation and further review of the listed variants of uncertain significance are recommended.

Synthetic demo document produced for the Attma software demonstration. It does not describe a real person and must not be used for any clinical purpose.
